INDEX FOR VOLUME 29

Abelson, Robert P. Review of "B. J. Winer, *Statistical Principles in Experimental Design.*" 421–423.

Aitkin, M. A. Correlation in a singly truncated bivariate normal distribution. 263–270.

Binder, Arnold (with B. R. Wolin). Informational models and their uses. 29–54.

Brogden, Hubert E. Simplified regression patterns for classification. 393–396.

Chan, Man-Wai. A multivariate analysis of an experimental design involving a complete set of Latin squares. 233–240.

Cliff, Norman (with J. Ross). A generalization of the interpoint distance model. 167–176.

Cornfield, Jerome (with J. M. Gurian and J. E. Mosimann). Comparisons of power for some exact multinomial significance tests. 409–419.

Dwyer, Paul S. Review of "Samuel S. Wilks, *Mathematical Statistics.*" 211–212.

Dwyer, Paul S. The mean and standard deviation of the distribution of group assembly sums. 397–408.

Edwards, Allen L. Social desirability and performance on the MMPI. 295–308.

Eisler, Hannes. A choice model for paired comparison data based on imperfectly nested sets. 363–370.

Green, Bert F., Jr. Review of "S. S. Tomkins and S. Messick (Eds.), *Computer Simulation of Personality.*" 290–292.

Greeno, James G. (with T. E. Steiner). Markovian processes with identifiable states: General considerations and application to all-or-none learning. 309–333.

Gulliksen, Harold. "Samuel Stanley Wilks." 103–104.

Gurian, Joan M. (with J. Cornfield and J. E. Mosimann). Comparisons of power for some exact multinomial significance tests. 409–419.

Hamdan, M. A. (with H. O. Lancaster). Estimation of the correlation coefficient in contingency tables with possibly nonmetrical characters. 383–391.

Harary, Frank. A graph theoretic approach to similarity relations. 143–151.

Harris, Chester W. (with H. F. Kaiser). Oblique factor analytic solutions by orthogonal transformations. 347–362.

Hays, William L. Review of "William A. Scott and Michael Wertheimer, *Introduction to Psychological Research.*" 288–290.

Heermann, Emil F. The geometry of factorial indeterminancy. 371–381.

Kaiser, Henry F. (with C. W. Harris). Oblique factor analytic solutions by orthogonal transformations. 347–362.

Keats, John A. Some generalizations of a theoretical distribution of mental test scores. 215–231.

Kraemer, Helena Chmura. Estimation in the three-state Markov learning model. 131–141.

Kruskal, J. B. Multidimensional scaling by optimizing goodness of fit to a nonmetric hypothesis. 1–27.

Kruskal, J. B. Nonmetric multidimensional scaling: A numerical method. 115–129.

Lancaster, H. O. (with M. A. Hamdan). Estimation of the correlation coefficient in contingency tables with possibly nonmetrical characters. 383–391.

Lord, Frederic M. Nominally and rigorously parallel test forms. 335–345.

Lumsden, James (with J. Ross). Comment on Feldt's "Use of extreme groups." 207–209.

Madansky, Albert. Instrumental variables in factor analysis. 105–113.

McLean, Leslie D. and Stanley, Julian C. Review of "William L. Hays, *Statistics for Psychologists.*" 283–284.

Meredith, William. Canonical correlations with fallible data. 55–65.

Meredith, William. Notes on factorial invariance. 177–185.

Meredith, William. Rotation to achieve factorial invariance. 187–206.
Michael, William B. Review of "Anne Anastasi, *Psychological Testing.* (2nd ed.)." 292–293.
Mosimann, James E. (with J. M. Gurian and J. Cornfield). Comparisons of power for some exact multinomial significance tests. 409–419.
Newhouse, Albert (with S. R. Pinneau). Measures of invariance and comparability in factor analysis for fixed variables. 271–281.
Parthasarathy, K. R. Enumeration of paths in digraphs. 153–165.
Pinneau, Samuel R. (with A. Newhouse). Measures of invariance and comparability in factor analysis for fixed variables. 271–281.
Potthoff, Richard F. On the Johnson-Neyman technique and some extensions thereof. 241–256.
Ramanujacharyulu, C. Analysis of preferential experiments. 257–261.
Roberts, Alan H. (with R. Swentzell). On the interaction of the subject and the experiment in the matching model. 87–101.
Ross, John. Mean performance and the factor analysis of learning data. 67–73.
Ross, John (with N. Cliff). A generalization of the interpoint distance model. 167–176.
Ross, John (with J. Lumsden). Comment on Feldt's "Use of extreme groups." 207–209.
Savage, Leonard J. Review of "Howard Raiffa and Robert Schlaifer, *Applied Statistical Decision Theory.*" 213.
Steiner, Theodore E. (with J. G. Greeno). Markovian processes with identifiable states: General considerations and application to all-or-none learning. 309–333.
Swentzell, Ralph (with A. H. Roberts). On the interaction of the subject and the experiment in the matching model. 87–101.
Tatsuoka, Maurice M. Review of "Joan H. Criswell, Herbert Solomon, and Patrick Suppes (Eds.), *Mathematical Methods in Small Group Processes.*" 285–288.
Watson, F. R. A new method for solving simultaneous linear equations associated with multivariate analysis. 75–86.
Wolin, Burton R. (with A. Binder). Informational models and their uses. 29–54.
